

# iVUE Green

## What is iVUE® Green?

iVUE Green is a new NISC® service that tracks, analyzes and delivers energy information to you, which then allows you to manage your utility bills and energy usage.

## What is Utility Bill Pay<sup>SM</sup>?

Utility Bill Pay (UBP) is a service NISC offers to multi-site commercial, industrial and government entities like Wal-Mart, T-Mobile, JCPenney, Hobby Lobby and Johnson Controls. We currently process and pay 100,000 utility invoices per month and at the same time capture the consumption data that is reported for energy analysis to these UBP customers on our secure website.

## What are the benefits of iVUE Green?

- **UBP Program** - Over 2,000 of our 100,000 UBP invoices are mailed to NISC from our Members/Customers each month. By implementing iVUE Green for our UBP customers, you will pass the invoice data to NISC through an electronic interface. This will save you the cost to print and mail the bill. This will save NISC the cost to process and key the bill, and for those Members/Customers accepting ACH payments, we save on the cost to print and mail a check for the payment. Just the paper savings on 2,000 invoices and 2,000 checks will help our environment.
- **Key Account Program** - This program is intended to provide you with an energy management reporting tool that helps you bring value added information to your key accounts. You should target your large energy users or those looking for ways to track energy efficiency programs.
- **Cooperative Footprint** - This program will allow you to track and report the total consumption data for your cooperative/company or you can review it based on an aggregate total by rate class.

## Do I have to be a Member of NISC?

No, any utility who wants NISC to process and track key account data can enroll in the program.

## What if I'm using CAPS or Horizon CIS?

You can still participate in the iVUE Green "key account" program. You would simply scan or fax a copy of the invoices you wanted to include in iVUE Green each month. NISC will hand key the invoice into our database and make it available to you on a secure website.

## What are the costs?

There is no charge for the UBP program. The "key account" program will include a one-time setup fee ranging from \$250 - \$1,000. The monthly transaction fee will range from \$0.10 per invoice if it's part of an electronic interface to \$2.00 per invoice if it's hand keyed with a monthly minimum of \$100.

## What type of energy analysis reporting is available?

You can provide a variety of reports including usage trends, cost per square foot, cost per production unit, weather normalized, Energy Star® and Green House Gas. You can assist with conservation and efficiency discussions by providing them with the tool to track their improvements.

## How do I get started?

Contact Stephen Oberhausen at 1.866.WWW.NISC extension 6801 or by e-mail at [stephen.oberhausen@nisc.coop](mailto:stephen.oberhausen@nisc.coop).
